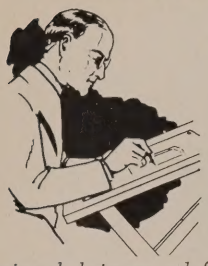
SOME REASONS FOR THE SUCCESS OF MIAMI CABINETS



Experienced designers and foremost architects have collaborated in combining beauty with utility.

DESIGN:—The modern bathroom demands beauty and the first requisite for a cabinet is a graceful design that will add a distinctive touch to the picture.

But the cabinet is the most used piece of equipment in the bathroom and must be rugged in construction also; it is subjected to occasional abuse and has to be so designed that it will last a life time in spite of the most adverse conditions.

Eminent architects have submitted their conceptions of attractive designs and their requirements for beauty have been interpreted by capable engineers in terms of practical construction—combining in Miami Cabinets the maximum of beauty and utility.

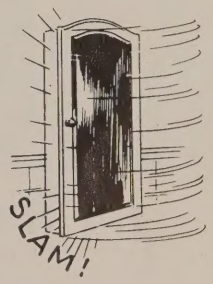
CONSTRUCTION:—Long life is built into every Miami Cabinet that leaves the factory. The bodies and flanges, carefully formed from heavy gauge auto body steel, are electrically welded and heavily reinforced to provide maximum strength.

A man can stand on a Miami door without injuring the mirror.

The doors on all models are air-cushioned to absorb shocks and in the flush door types the mirrors are set in a heavy waterproof packing which prevents deterioration.

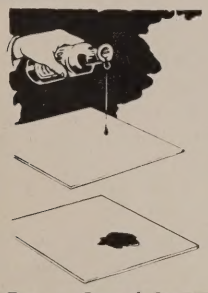
Venetian mirrors are "suspended" on special clips rather than fastened rigidly to the door panel. This provides a cushion that absorbs shocks and small felt pads provide an insulating air pocket behind the mirror that protects it against the steam in the bathroom.

Refinements in the construction include adjustable bulb edge glass shelves, the U-shaped brackets that prevent the shelves from tipping and the solid brass hinges.



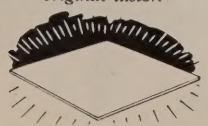
You can SLAM a Miami door without breaking the mirror.

A few drops of iodine on an ordinary white surface cannot be removed—



—But on Crystal Snow—

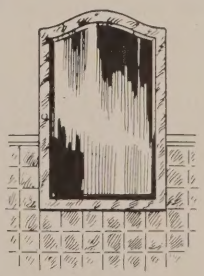
Bon Ami and a soft rag will remove the stain and restore the original luster.



FINISH:—A cabinet is no better than its finish. The best materials, the finest workmanship, the best principles of construction cannot prevent or even delay that shabby appearance that is so commonly found in steel bathroom cabinets because the finish couldn't stand the severe atmospheric conditions.

With this in mind the Miami Cabinet Company developed Crystal Snow which is of a pyroxylin nature applied by a special process. It is guaranteed not to discolor with age, nor to crack, craze or peel. The original luster will remain indefinitely in spite of frequent cleaning to remove iodine, acid stains or match burns—a fact which earned for Crystal Snow the title:

"The Finish That Won't Retain A Stain."



A Miami Cabinet can be finished at a small additional charge to match any color.

THE Miami DeLuxe Cabinet is generally conceded to be the finest and most complete bathroom cabinet on the market. It may be had in the three mirror styles shown on this page or for those who prefer the ultimate in simplicity, the cabinet is furnished with plain mirrors.

The DeLuxe is fitted with adjustable wing mirrors carrying attractive light brackets which permit perfect illumination for the entire bathroom and concentrate the light where it is most needed.

A luminous tipped switch at the bottom of the cabinet controls the lights. Regular specifications include locked compartment for poisonous medicine and a drop for used razor blades.

The shelves are heavy black Vitrolite.

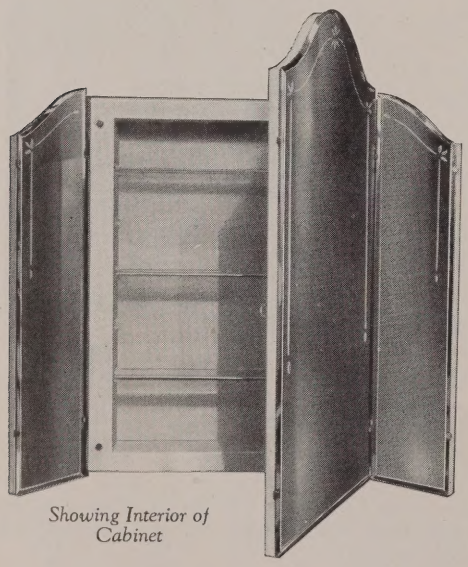
THE handsome "ABS" mirror design shown above consists of a black enameled border with polished gold cut work showing through. The mirror is of the very highest quality and the cabinet, furnished in three sizes, is exceptionally attractive and convenient. Next to the De Luxe this model represents our highest ideals in the art of cabinet construction and is recommended for the fine home or apartment. Regular equipment includes a drop for used razor blades and three adjustable, bulb edge glass shelves.

THE "H" mirror design shown above is furnished regularly on this series of cabinets; it is very pleasing in appearance and that fact combined with the exceptionally reasonable price has made these units extremely popular. The adjustable wing mirrors permit perfect vision of the head, back, and shoulders which makes this type cabinet especially convenient for shaving. Used over a dressing table, the unit can also be transformed into an attractive and practical vanitie.



Showing Interior of Cabinet

IN addition to the mirror designs shown on this page, these units are also furnished with entirely plain glass where desired; and the Model 780-V may be had with the "W" design shown on the Victorian model on page 4.

These cabinets are finished regularly in Crystal Snow. The No. 780-V and No. 770-V models are fitted with a drop for used razor blades and all three of the models are furnished with three adjustable bulb edge glass shelves.

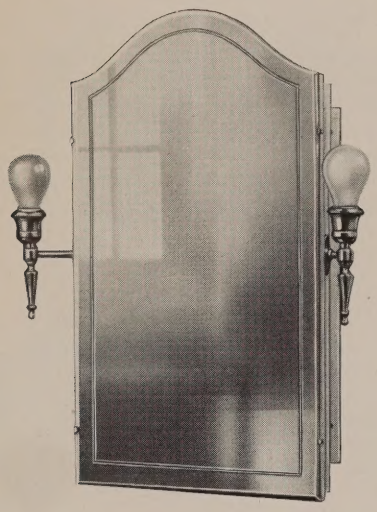
The Countess—Model 780-VM
The Duchess —Model 770-VM



MIAMI Cabinets fitted with these attractive light fixtures mean new beauty in your bathroom lighting at an amazing economy in cost. The brackets, made of bronze and finished in chromium, are located on either side of the cabinet, thus concentrating the light at the point it is needed most. At the same time enough reflected light is diffused by the mirror to illuminate the entire bathroom.

These brackets may be attached to any cabinet in the Miami line—except the wing models.

WIRING:—The wiring system is a model of simplicity and has been approved by the Underwriter's Laboratories. A steel channel inside the flange of the cabinet provides a very effective conduit. A junction box is welded to the top of the cabinet and is fitted with an access plate so that cabinet and house wires can easily be spliced from the inside of the cabinet after it is set in the wall opening. If necessary, the cabinet wiring may be done on the job, otherwise the cabinets will be shipped completely wired and ready for installation.

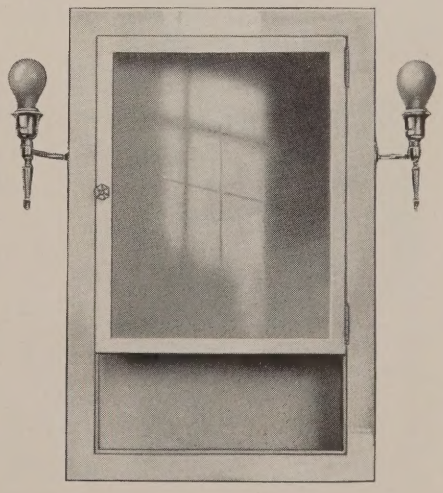
NEW BEAUTY IN BATHROOM LIGHTING

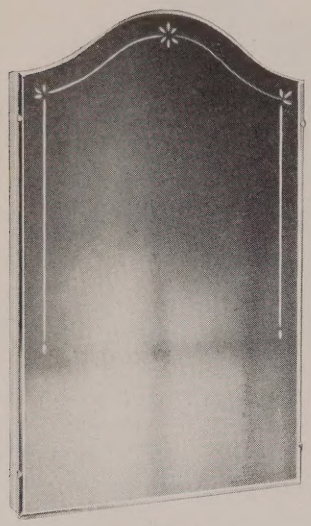
WALL OPENING:—Make wall openings one inch longer where cabinets are fitted with brackets to provide room for the junction box.

TYPES OF BRACKETS:—Brackets may be either keyless or fitted with pull chains and with straight or curved stems. The curved-stem brackets *must* be used on the Venetian models and *may* be used on the regular recessed types. In either case they are attached to the return flange of the cabinet.

The straight-stem brackets are designed for the regular recessed models and are attached to the face of the cabinet.

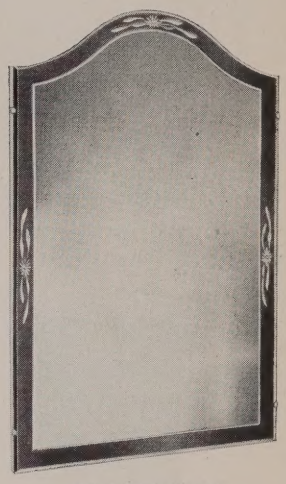
These units will add a distinctive and very practical touch to your bathroom and we shall be glad to show you where they will save you money on your lighting.





THE cabinets shown on this page are all-glass Venetian models so designed that they resemble unusually handsome mirrors hung flush on the wall as there is no knob, hardware or portion of the body visible to indicate that a spacious cabinet is hidden behind the door. These models are furnished in a variety of mirror designs; the regular or "H" design is shown at the left and consists of a silver line etched in the glass enhanced at the corners and top with a simple figure.

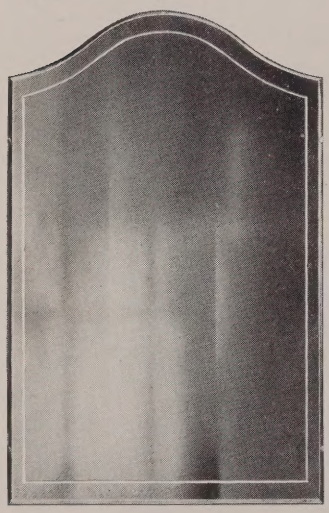
Model 750-VH
Model 710-VH
Model 700-VH



THE handsome "AB" design shown at the right may be had in the three sizes indicated. This design consists of a black border enameled in the glass with polished gold cut work showing through. In addition to these models the same design can be furnished on the Victorian, Renaissance and Colonial cabinets shown on page 4.

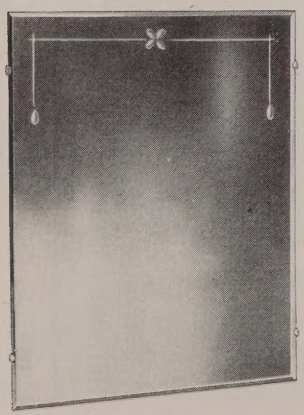
The quality of the glass is the very best and the black border adds depth to the almost flawless mirror which must be seen to be fully appreciated. This mirror design is recommended for the finer class of homes and apartments.

Model 750-VAB
Model 710-VAB
Model 700-VAB



Model 750-VM
Model 710-VM

THE design shown at the left is furnished in two sizes and provides a most attractive installation for those who prefer the ultimate in simplicity. The mirror is of exceptionally high quality and the full polished mitre line enhances its natural beauty.



Model 690-VH

THE cabinet at the left is recommended as a distinctive fixture for the inexpensive bathroom. The square cut mirror hides the cabinet body completely and in addition to the mirror design shown, the cabinet may be had with a square "AB" mirror or an entirely plain glass. The cabinet is made in one size only.

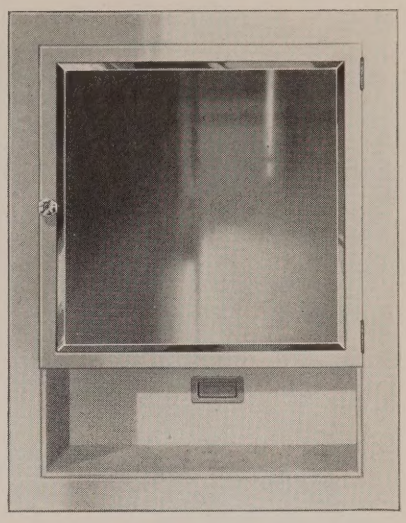
Model 100
Model 150

FLUSH-DOOR RECESSED MODELS

MODEL 100 is furnished regularly in Miami Crystal Snow. It is fitted with a beveled plate mirror and equipped with a locked compartment for poisonous medicines. The shelves are adjustable, heavy bulb edge glass. The hinges are made from solid brass and chromium plated. A slot for used razor blades is regularly furnished.



Model 110

MODEL 150 is identical to model 100 except it does not have the locked compartment for poisonous medicines and is fitted with three full width heavy bulb edge glass shelves. Regular specifications include Crystal Snow finish, bevel mirror and razor blade drop.

MODEL 110 cabinet shown above is fitted with a 16″ x 16″ bevel plate mirror and finished regularly in Crystal Snow. It is equipped with three heavy bulb edge glass shelves and razor blade drop. The open shelf below the door provides a convenient repository for toilet or shaving articles.

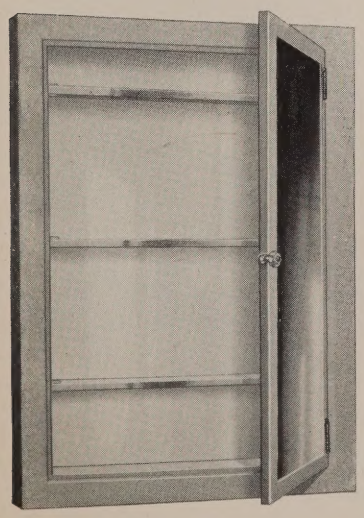
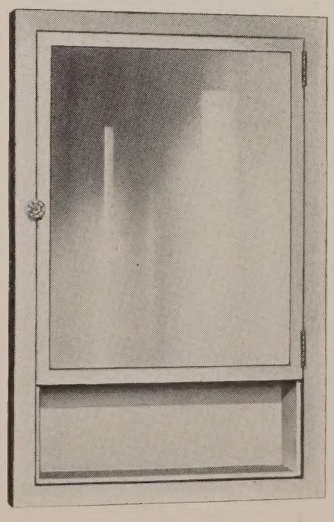
All Wall Openings are 3⅞″ deep.



MODELS 300, 400, 310 and 410 are especially recommended for the modest bathroom where price is to be considered. These cabinets are very practical in design, rugged in construction and of a uniformly high quality.

Regular specifications include Crystal Snow finish, plain plate mirrors and three adjustable bulb edge glass shelves. Beveled mirrors may be substituted at a slightly higher price.

Models 300 and 400



Models 310 and 410

Model 4RS

THE unit shown above consists of a plain mirror with a recessed shelf beneath. It is a good combination for use in a downstairs lavatory—or wherever a full cabinet is not required and is often used for hotel installation as the recessed shelf provides ample storage space for the articles of the transient guest.

SPECIFICATIONS

Mirror	16″ x 16″
Overall	18¾″ x 26¾″

The American Standard—Model 110-AS

THE AMERICAN STANDARD

MIAMI designers working with hotel men of wide practical experience developed "The American Standard" model which combines the maximum of utility and convenience with an economy of installation that makes this cabinet especially practical for hotel use.

EQUIPMENT:—Standard equipment includes—overhead towel tray, center light fixture, combination shade and holder, water bag hook, combination used towel and razor strop hook, switch, switch box, junction box, bottle opener, razor blade drop and Vitrolite shelf.

PATENTED

The razor-blade drop used in Miami Cabinets is protected by U. S. Letters Patent No. 1768707.

SPECIFICATIONS

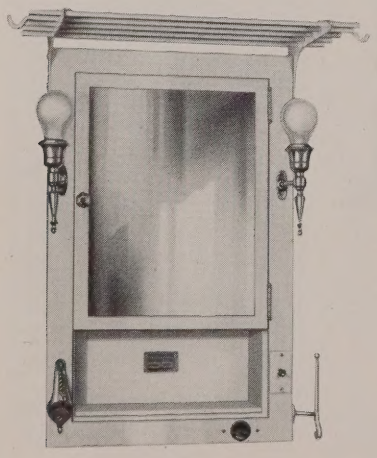
Mirror	16″ x 16″
Overall	20¾″ x 26¾″
Inside	16¾″ x 22¾″
Wall Opening	17½″ x 24½″

This equipment can be altered to meet individual requirements and the same accessories can be attached to the other flush door cabinets in the Miami line. The model 4RS-AS is very popular and the model 410-AS is also a practical unit. The cabinet is completely wired, assembled, and shipped to the job ready for installation except for the towel tray which can be attached very quickly.

Material savings can be effected by this cabinet. First, the wiring eliminates one electrical outlet in every bathroom since it is necessary for the electrician to bring only one lead into the cabinet wall opening. Besides this the accessories do not have to be attached separately to the wall, and the total savings determined from cost records on actual jobs average over five dollars a bathroom.

NOTE: Hotel type cabinets are not carried in regular stock and small orders therefore, cannot always be handled promptly.

This razor blade drop attached directly to the wall provides a very practical and inexpensive solution to a real problem. It is finished either in chromium or enamel and is so designed that it cannot be removed by the guest.



AT the left is shown an attractive and practical unit that can be made up from flush door or Venetian model by attaching the new chromium plated Miami fixtures to the cabinet flange. These fixtures made only for Miami Cabinets are formed from solid brass, and their distinctive modern designs make them a real addition to any bathroom.

The light brackets are connected to the house wires and operated either by pull chains or a wall switch. Other fixtures which may be attached include tumbler holder, tooth brush holder, and combination used towel and razor strop hook.

MIAMI BATHROOM ACCESSORIES

WITH a great deal of pride we present this beautiful line of bathroom accessories to the Architects and Builders of America. It is now possible to obtain a complete service on your bathroom accessories from one source and with the protection of a name that has long been synonymous with Quality.

Miami Bathroom Accessories are made of bronze and offered in four finishes—chrome, nickel, enamel and solid nickel silver. The designs—executed by master craftsmen—are perfect in every detail and the workmanship throughout is of the highest character.

The fixtures shown on the following pages form but a part of an extensive line, and upon request, we will gladly furnish descriptive matter on other units. We are also prepared to quote prices on fixtures of a special nature.

Advisory Service to Architects: A long experience in furnishing bathroom fixtures for many of the largest and finest buildings in the country is available to architects without charge to assist them in planning and selecting the fixtures best suited to the jobs in hand.

(1) It eliminates unsightly screw heads which frequently spoil the appearance of otherwise beautiful fixtures.

(2) When used in public buildings it prevents removal or theft of the fixture which cannot be removed without the special key.

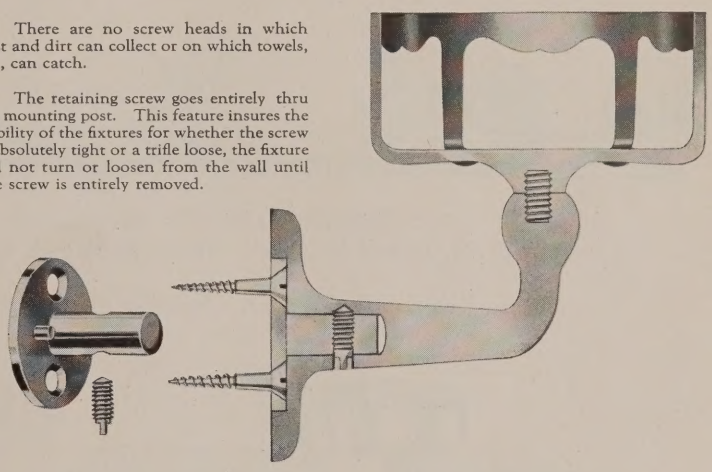
(3) The mounting device may be installed before the final finish is put on the walls and the fixtures installed later. In this way there is no danger of marring the wall finish during installation or of injuring the finish of the fixture while the final decorating is being done.

(4) The mounting devices may be shipped to the job in advance of the fixtures which, therefore, do not have to be stored, eliminating danger of theft.

(5) White enamel fixtures can be installed without danger of chipping the enamel.

(6) There are no screw heads in which dust and dirt can collect or on which towels, etc., can catch.

(7) The retaining screw goes entirely thru the mounting post. This feature insures the stability of the fixtures for whether the screw is absolutely tight or a trifle loose, the fixture will not turn or loosen from the wall until the screw is entirely removed.



Miami's Concealed Screw Device

THIS device used by the Miami Cabinet Company for mounting their bathroom accessories, adds the final touch to the appearance of fine fixtures.

It consists of a brass disc in the center of which is a post $\frac{3}{8}$" in diameter and $\frac{7}{8}$" long with a hole drilled and tapped $\frac{1}{2}$" from the disc. The mounting fixtures are of two sizes; one with $1\frac{3}{8}$" disc for the usual fixtures and one with a larger disc for extra large or heavy fixtures. Beside the post is a small stud which fits into a recess in the fixture and insures that the screw hole in the fixture lines up accurately with tapped hole in the mounting device.

Method of Installation

THE mounting device is first fastened to the wall with ordinary flat head screws. If the device and fixture are shipped together they must first be separated.

The fixture is then placed against the flange and turned into the recess in the fixture.

The special screw is next placed in the hole in the fixture and tightened until it is fast. A special key for tightening the screw is furnished with each order.

When there are a number of similar articles to be installed, especially items with two brackets which must be spaced accurately as in the case of towel bars, a template is furnished which insures the correct spacing and facilitates installation.
